

Net Technologies

Coverage & Performance Testing Services

Net Technologies offers Coverage & Performance Testing services for the telecommunication industry with technologies such as GSM, UMTS, LTE, TETRA and WiMAX. We have more than 10 years of experience in delivering these services for the main telecom vendors globally. To guarantee the highest level of quality for the services delivered we have developed our own methodology and toolset, T-ProM.

Coverage & Performance Testing Services

- Coverage & performance testing preparation and organization
- Drive test & walk test measurements (outdoor, indoor buildings, tunnels)
- KPI's definition
- Coverage verification
- Measurement post processing & analysis
- Coverage & performance measurement reports
- Use of 3rd parties radio planning tools: Nemo/Tems

We offer

- Turn-Key projects: we deliver on a lump sum turn key basis, any size, any duration.
- Time/Item based service: we deliver any implementation on month/site/cluster basis.
- Consulting services

T-ProM is part of a full range of services that provide solutions for the whole life cycle of the implementation of the access part of any wireless network.

Methodology and Toolset (T-ProM[®])

Our complete Coverage & Performance Testing Methodology and Toolset (T-ProM) is an integrated, vendor independent approach, for all current mobile technologies.

- Coverage & performance testing preparation guidelines
- KPI's definition
- Drive test tool set up guidelines
- Drive test measurement procedures
- Coverage & performance testing forms and reports
- Post processing procedures
- Coverage & performance report templates
- In-house post processing tool
- In compliance with Net Technologies ISO 9001:2008 certified quality system

Key Features

- Step by step instructions for the optimum sequence of work
- User-friendly and user-defined input forms
- Complete set of report templates
- Applies to all current mobile technologies and all main vendors

T-ProM, a process based methodology and documented best practice, covers all the processes, procedures and needed reports for the delivery of the service of coverage & performance testing.

The method is composed of:
